Notes:

For Theory courses: There shall be MSE, ISE and ESE. The ESE is a separate head of passing.

For Lab courses: There shall be continuous assessment (LA1, LA2, ESE). The ESE is a separate head of passing. The Y in the PoE indicates external component for ESE. Minimum two AICTE mandatory courses need to be completed for award of degree.

The contact hours of guide for Final Year BTech project are 4 hrs for Sem VII and 8 hours/week for Sem VIII, for 9 students.

For further details, refer to Academic and Examination rules and regulations.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

	CO-PO Mapping														
		Programme Outcomes (PO)												PSO	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3														
CO2	2		3	3											
CO3	3		2	2											

The strength of mapping is to be written as 1,2,3; Where, 1: Low, 2: Medium, 3: High.

Each CO of the course must map to at least one PO.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

			List of Experime	nts / Lab Activities						

List of Experiments:

Small student groups formed will need to undertake following stages in this course; -

- 1. Identify a small construction project and collect its documents defining scope (BOQ, drawings etc.)
- 2. Prepare the Work breakdown structure(WBS) to evolve at least 100 distinct activities (appropriate software may be used)
- 3. Schedule the project using contemporary software taking into consideration following:-
- Activity list generated from WBS
- Construction methodology decision for each activity
- Important Resource allocations
- Precedence relations (Both technical and resource constrained)
- Time duration allotment (based upon resources, work content)
- Working calendar
- 4. Demonstrate quality management plan and safety management plan for the same project at preliminary level.

Assessment

There are three components of lab assessment, LA1, LA2, and Lab ESE

IMP: Lab ESE is a separate head of passing. Lab ESE is treated as End Semester Exam and is based on all experiments/lab activities.

Assessment	Based on	Conducted by	Typical Schedule	Marks
LA1	Lab activities,	Lab Course	During Week 1 to Week 6	30
LAI	attendance, journal	Faculty	Marks Submission at the end of Week 6	30
LA2	Lab activities,	Lab Course	During Week 6 to Week 12	30
LAZ	attendance, journal	Faculty	Marks Submission at the end of Week 12	30
Lab ESE	Lab Performance	Lab Course	During Week 12 to Week 18	40
Lau ESE	and documentation	faculty	Marks Submission at the end of Week 18	40

Week 1 indicates starting week of a semester. The typical schedule of lab assessments is shown, considering a 26-week semester. The actual schedule shall be as per academic calendar. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments.

Course	Information
Course	

	Course information
Programme	B.Tech. (Civil Engineering)
Class, Semester	Final Year B. Tech., Sem VII
Course Code	5CV448
Course Name	Mini Project 5: Concrete Structures Design and Drawings
Desired Requisites:	Design of Concrete structures I

Teaching	Scheme		Exami	nation Scheme (Marks)	
Lecture	-	LA1	LA2	ESE	Total
Tutorial	-	30	30	40	100
Practical	2 Hrs/week				
Interaction	-			Credits: 1	

	Course Objectives
1	To demonstrate the design of residential building and combined footing.
2	To demonstrate the design of water tank with staging and retaining wall.
2	To impart training of various analysis, design and drawing professional software for civil
	engineering structures using relevant IS codes.
	Course Outcomes (CO)
CO1	Analyse real life civil engineering RCC structures.
CO2	Appraise various structural designs and drawings.
CO3	Create structural detailing and drawings.

Module Contents

The lab work shall consist of detailed design &drawing of the following R. C. structures by Limit State method unless specified.

- 1. Residential G+2 storey building
- 2. Any two from following
- a) Circular water tank resting on ground with rigid base. (by working stress method)
- b) Retaining wall (cantilever or counter fort type)
- c) Combined footing/ raft foundation/ pile foundation.

Note:

2014.

Delhi, 1st Edition, 1999.

3

4

- Computer analysis of any one frame for project No.1 shall be performed for Dead Load, Live Load & Earthquake Loads using relevant application software.
- Drawings prepared shall indicate ductility details as per the provision in IS: 13920.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

CO₂ Calculate forces and displacements for special structures. Evaluate external and internal forces in frames and beams using relevant software. CO3 Module **Module Contents Hours** a) Basics in structural analysis Types of structures, various loads and methods of structural analysis, energy theorems and application of virtual work principle. Introduction to basic software's for structural analysis. 7 Ι b) Influence line Diagrams for Indeterminate Structures Muller Breslau principle, qualitative and quantitative Influence line diagrams for reactions, Shear force and bending moment's for propped cantilever, fixed beam and continuous beams. Practical applications of influence lines. **Beams Curved in Plan** Analysis of statically determinate and indeterminate structures curved in plan 7 П subjected to loads normal to plane of beam using strain energy method. Bending moments and twisting moment diagrams. Fixed Arches

CO-PO Mapping											
	Programme Outcomes (PO)										
	1 2 3 4 5 6										
CO1			2	2		3					
CO2			2	2		3					
CO3	1		2			2					

The strength of mapping is to be written as 1,2,3; Where, 1:Low, 2:Medium, 3:High.

Each CO of the course must map to at least one PO.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

Walchand College of Engineering, Sangli

(Government Aided Autonomous Institute)

AY 2022-23

Course Information								
Programme	B. Tech. (Civil Engineering)							
Class, Semester	Final Year B. Tech., Sem. VII							
Course Code	5CV413							
Course Name	Advanced Water and Wastewater Treatment							
Desired Requisites:	Water Treatment Technology, Sewerage and Sewage Treatment							

Teaching	Scheme	Examination Scheme (Marks)								
Lecture	3 Hrs./week	MSE	ISE	ESE	Total					
Tutorial	-	30	30 20		100					
Practical	-									
Interaction	-	Credits: 3								

Course Objectives							
1	To provide students the necessary knowledge and concepts of advancements/emerging techniques						
1	of treatment in physical, chemical and biological treatment processes.						
2	To impart students with the skill of design and operation of water and wastewater treatment plants						
2	based on latest technology.						
3	To provide students prerequisite knowledge necessary for higher studies and research in the field						
3	of water and wastewater treatment.						
4	To encourage students for undertaking further studies in the field of environmental engineering.						
	Course Outcomes (CO)						
CO1	Explain and Apply the concepts of unit operations and processes for the removal of dissolved						
COI	organics and inorganics.						
CO2	Analyze and evaluate the ion exchange, activated carbon, membrane filtration and wetland based						
CO2	treatment systems.						
CO3	Design ion exchange, activated carbon, membrane filtration and wetland systems.						

Module	Module Contents										
I	Fundamentals Need for Advanced water and wastewater Treatment, Reactors and Reaction Kinetics: Types of Reactions and Reaction, Kinetics Types of reactors and Principles of Reactor Design, Principles of aeration, Gas-liquid mass transfer, two film theory										
П	Removal of dissolved organics and inorganics Adsorption processes, causes and types of adsorption, influencing factors, adsorption equilibria and development of adsorption isotherms, activated carbon adsorption kinetics, analysis and design of GAC and PAC contactors. Ion Exchange: Process, Ion exchange resins, exchange capacity, ion exchange chemistry and reactions, Applications for hardness and TDS removal, Design of ion exchange units										
III	Disinfection Disinfection with ozone: chemistry, modeling, estimation of ozone dosage. UV disinfection: system components, modeling, Estimation of UV dose.	4									
IV	Membrane Processes Membrane Filtration: Terminology, Process classification, Membrane configurations, Membrane operation for micro filtration, Ultra filtration and Reverse osmosis, Membrane fouling and its control, Application of Membranes. Electro dialysis: Theory, Area and power requirement, Disposal of concentrate waste streams.	6									

V Cyclic activated sludge process: System, Operation and Design Moving Bed Bioreactor (MBBR): System, Operation and Design Membrane Bioreactor: System, Operation and Design Constructed wetland Constructed Wetland (CW): Classification and application, Design and operation of horizontal flow subsurface, Vertical flow systems Emerging concepts in CW, Sludge treatment constructed wetland Design and operation of Water hyacinth system Text Books Peavy H, S, Rowe D, R, and Tchobanoglous G, "Environmental Engineering", McGraw-Hill Book Company, International edition 1985. CO2 *Apply* appropriate dispersion models estimate air pollutant concentrations Analyze situations leading to air pollution and design air pollution control strategies with due CO3 consideration to technical, environmental, health, safety and social considerations

Module	Module Contents	Hours
I	Air pollution: A retrospective Air pollution: sources and types and effects on biosphere, National and international air emission standards; air pollution emission inventory; emission factor; air quality index; Strategy for effective control of air pollution in India, Introduction to air pollution control act, and international agreements for mitigating global air pollution effects.	7
II	Meteorology Physics of atmosphere, Solar radiation, Wind circulation, Lapse rate, Inversion, Stability conditions, Pasquil stability model, maximum mixing depth, Wind rose, Plume behaviour, Global effects of air pollution: Green house effects, acid rain and ozone layer depletion, Heat island effect, Visibility, Photochemical reaction	7
III	Dispersion of pollutants in the atmosphere Eddy diffusion model, the Gaussian dispersion model, point source, Line source, maximum ground level concentration, Determination of stack height, sampling time corrections, Effects of inversion trap Definition, distribution and source of different particulate matter, Terminal settling velocity, basics of hood and duct design for particulate collection	6
IV	Control Equipment for Particulate Matter Operation design and component detailing of Settling chamber, Cyclone, Wet collectors, Fabric filter, and Electrostatic precipitator	7
V	General control of Gaseous pollutants Principles of absorption, Adsorption, Basic design of absorption and adsorption units, Incineration and after burner, Control of SO ₂ , NOx Course Contents for B. Tech. Programme, Department of Civil Engineering, AY 2022-23	7

VI	Motor Vehicle Emissions Automobile Source Emission of pollutants from automobiles, Photochemical smog, Reduction of emissions by different methods, Alternative fuels and their utilizations.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

Assessment

There are three components of lab assessment, LA1, LA2, and Lab ESE

IMP: Lab ESE is a separate head of passing. Lab ESE is treated as End Semester Exam and is based on all experiments/lab activities.

Assessment	Based on	Conducted by	Typical Schedule	Marks
LA1	Lab activities,	Lab Course	During Week 1 to Week 6	20
LAI	attendance, journal	Faculty	Marks Submission at the end of Week 6	30

	LA2	Lab activities, attendance, journal	Lab Course Faculty	During Week 7 to Week 12 Marks Submission at the end of Week 12	30
I	Lab ESE	Lab Performance and documentation	Lab Course faculty	During Week 13 to Week 18 Marks Submission at the end of Week 18	40

Week 1 indicates starting week of a semester. The typical schedule of lab assessments is shown, considering a 26-week semester. The actual schedule shall be as per academic calendar. Lab activities/Lab performance shall include performing experiments, mini-project, presentations, drawings, programming and other suitable activities, as per the nature and requirement of the lab course. The experimental lab shall have typically 8-10 experiments.

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

	Course Information					
Programme	B. Tech. (Civil Engineering)					
Class, Semester	Final Year B. Tech., Sem. VIII					
Course Code						
Course Name	Sustainable and Energy Efficient Building Technologies					
Desired Requisites:	Courses in Building Materials and Construction, Building Planning and Design					

Teachir	ng Scheme	Examination Scheme (Marks)								
Lecture	3 Hrs./week	T1 T2 ESE To								
Tutorial	-	20	20	60	100					
Practical	-									
Interaction	-		Credits: 3							

	Course Objectives							
1	To bring in a third parameter of energy into the performance of buildings.							
2	To explore the alternative materials and technologies for various components that can minimize the energy consumption in buildings.							
3	3 To study the different rating systems for assessment of Green Buildings							
	Course Outcomes (CO) with Bloom's Taxonomy Level							
CO1	Communicate in the language of energy in context to energy policy and express the relevance of environment and energy efficiency in context to construction industry.	Understand						
CO2	Apply and assess the energy contribution of various materials and components in buildings.	Apply						
СОЗ	Develop an ability to design sustainable and environmental friendly building systems leading to better efficiency in terms of energy, cost and performance.	Create						

Module	Module Contents	Hours
I	Buildings and Environment Energy, planning & urban form, Global warming, causes, energy considerations, energy conservation and energy efficiency, energy systems and spatial structures, Classification of energy, primary and secondary energy, commercial and non-commercial energy, renewable and non re-newable energy, Global primary energy reserves and consumption, energy distribution, Units of Energy with examples, .	5
II	Energy and Environmental issues in Building Materials General facts, energy resources and their impacts on environment, energy in context to built environment, Sustainable buildings, sustainability and Objectives of Green buildings, planning aspects of	4

	sustainable buildings, energy consumption and efficiency in buildings, Design strategies, Material strategies, Parametric assessment, Env. Issues related to buildings materials.	
Ш	Conventional Materials and Techniques in Buildings Constraints in Choice of building systems, Pre & post construction performance, Properties of materials, Types of Physical, Mechanical, Chemical and Thermal characteristics, Introduction to structural and physical aspects of buildings, Conventional materials used in construction, Case studies of various building materials, Energy consumption in various building materials, Sustainability considerations.	6
IV	Sustainable Materials and Techniques for Masonry Felt requirements and real objectives of Green towns, Need and approach to sustainability, Green building materials, Design constraints, Appropriate materials and techniques in construction: Relevance of building blocks, mortars. Stabilized mud blocks, FAL-G blocks, Hollow concrete blocks, Calcium silicate bricks, Hourdi blocks, Energy comparison in building blocks., Relevance of Pozzolonic and combination mortars for masonry.	6
V	Roofing concepts in Green Buildings Structural inefficiencies in Conventional roofing systems, Concepts in roofing alternatives, Thatch roofs, Filler slab roofs, Filler materials, Composite beam-panel roofs / floors, hollow hourdi/concrete block roofs / floors, Ferrocement roofing systems, Masonry Domes and Vaults, Comparison of Energy consumption in roofing systems, Energy Embodied energy in buildings.	6
VI	Energy systems in Building Maintenance Elements of climate, Factors influencing climate, Climate and human comfort, Orientation of buildings, Comfort criteria, Heat exchange in buildings, Design for heat loss and heat gain in buildings, Concepts of Active and Passive Energy systems in Buildings, Use of modern gadgets leading to energy efficiency.	6

Assessment

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

Walchand College of Engineering, Sangli (Government Aided Autonomous Institute)							
	AY 2022-23						
Course Information							
Programme	B.Tech. (Civil Engineering)						
Class, Semester	Final Year B. Tech., Sem VIII						
Course Code	5CV438						
Course Name	Elective – 6 : Geosynthetics and Reinforced Soil Structures						
Desired Requisites:	Soil mechanics, foundation Engineering, Soil Mechanics Lab						

Teaching	Scheme	Examination Scheme (Marks)								
Lecture	3 Hrs/week	MSE	ISE	ESE	Total					
Tutorial	-	30	20	50	100					
Practical	-									
Interaction	-		Credits: 3							

Course Objectives

Students are expected to explore avenues of modern geotechnical Engineering structures focusing upon reinforced earth structures. They are expected to apply their knowledge of geotechnical engineering courses for studying behaviour of reinforced earth structures

8								
	Course Outcomes (CO)							
CO1	Realize the need and demand for the use of geosynthetic materials in the field of							
COI	geotechnical construction works.							
CO2	Design the Geosynthetics for the functions of separation, reinforcement, stabilization,							
CO2	filtration, drainage and moisture barriers.							
CO3	Distinguish and describe various manufacturing methods of Geosynthetics and its quality							
003	control tests							

Module	Module Contents	Hours
I	Introduction: Ground Improvement Techniques, Introduction to Geosynthetics — Basic description — Polymeric materials— Uses and Applications. Properties of Geotextiles — Geogrids — Geomembranes — Geocomposites.	8
II	Geotextiles: Design criteria for Separation – Reinforcement – Stabilization – Filtration – Drainage and Moisture barriers. Geogrids: Designing for Reinforcement – Stabilization – Designing Gabions – Construction methods.	6
III	Use of Geosynthetics in Roads : Geosynthetics in road ways- applications-role of subgrade conditions-desidn criteria-survivability-application in paved roads	6
IV	Reinforced Earth Retaining Walls: Components – External stability – Internal stability-Design of reinforced earth walls with strip, sheet and grid reinforcement.	8

V	Geomembranes: Pond Liners – Covers for Reservoirs – Canal Liners – Landfill Liners – Caps and closures, moisture barriers. Geocomposites: An added advantage – Geocomposites in Separation –Reinforcement – Filtration – Geocomposites as Geowebs and Geocells.	8				
	Natural Geotextiles: Natural fibres as geotextiles- factors governing the					
VI	use- jute fibres-coir geotextiles-bamboo/timber-combination of geotextiles.	6

	Course Information
Programme	B.Tech. (Civil Engineering)
Class, Semester	Final Year B. Tech., Sem VIII
Course Code	5CV443

Course Name Elective – 7 : Advanced Numerical Analysis

Desired Requisites: Engineering Mathematics

Teaching	Scheme	Examination Scheme (Marks)						
Lecture	3 Hrs/week	MSE	ISE	ESE	Total			
Tutorial	-	30	20	50	100			
Practical	-							
Interaction	-		Cre	dits: 3				

Course Objectives

- To impart knowledge of various numerical techniques to simulate and solve the problems of civil engineering.
- To solve generic versions of equations that arise in engineering disciplines.

Course Outcomes (CO)

- CO1 | Solve problems numerically related to non-linear equation, polynomials.
- CO2 | Solve problems numerically related to linear and nonlinear algebraic equations.
- CO3 | Solve problems related to numerical differentiation and integration.

Module	Module Contents	Hours
I	Introduction, roots of a non-linear equation and roots of a polynomial of n th degree [incremental search method, method of successive approximations, Newton's method, bisection method, secant method, Müller's method, synthetic division, Bairstow's method] and convergence study	7
II	Solution of (non-homogeneous) linear algebraic equations, review of matrix algebra, Gauss elimination method, Cholesky's decomposition method, householder method, Gauss-Siedal iterative method	7
III	Solution of non-linear algebraic equations, method of successive approximation, Newton's method, modified Newton – Raphson method, secant method	7
IV	Eigen values and Eigen vectors, reduction of generalized Eigen value problem to the standard Eigen value problem, methods for obtaining Eigen values and Eigen vectors [polynomial method, vector iteration method, Mises power method, Jacobi method]	7
V	Time marching schemes for solution of problems in time domain, numerical integration (2 – D) [Newton – Cotes method, Gauss – Legendre method]	7

VI	Solution of ordinary and partial differential equations, Euler's method, Runge – Kutta method, finite difference method, applications to problems of beam and plates on elastic foundation, Laplacian equation, consolidation equation, laterally loaded piles etc.	7

The assessment is based on MSE, ISE and ESE.

MSE shall be typically on modules 1 to 3.

ISE shall be taken throughout the semester in the form of a teacher's assessment. The mode of assessment can be field visits, assignments etc. and is expected to map at least one higher order PO.

ESE shall be on all modules with around 40% weightage on modules 1 to 3 and 60% weightage on modules 4 to 6.

Course Name Elective – 7 : Town and Country Planning

Desired Requisites: Building Planning and Design

Teaching	Scheme	Examination Scheme (Marks)							
Lecture 3 Hrs/week		MSE	ISE	ESE	Total				
Tutorial	-	30	20	50	100				
Practical	-								
Interaction	-	Credits: 3							

Course Objectives

This course is designed to be offered as elective to interested students who wish to consider town and country planning as their probable career option, It focuses on relevant practices in preparation of RP, DP, TPS etc. It also includes relevant legislations knowledge required for a modern town planner.

Course Outcomes (CO) CO1 Explain elements of regional plan(RP) and development plan(DP) CO2 Comprehend different aspects a town planning scheme CO3 Describe important provisions of different town planning legislations

Module	Module Contents	Hours
I	 Introduction Objective of town planning, principles, stages in town development, brief history growth of towns and theories of developments (ribbon, sector zone, concentric, multiple zone etc.) Institutional arrangements in Maharashtra (CIDCO, MMRDA, MHADA, SRA, TPVD etc.) 	7
II	Regional Plan (R.P) - Need of contents of Regional Plan - Regional Delimitation - Surveys necessary for Regional Plan - Analysis and Projections - Necessary Steps for starting and ending the process of Regional Planning - Relation with the state Plan and surroundings	7

	Development Plan (D.P)								
	- Surveys, types, duration etc.								
	- Analysis and Projections								
	- Demographic Projections								
	- Goals and objectives, Public Participation								
III	- Implementation and Financial Aspects.								
	- Delineation								
	- Relation with R.P.								
	- Content of DP and Planning norms								
	- Modifications, purchase notice								
	- Legal and Administrative process to start D.P.								
	Town Planning Scheme								
	- Concept of T.P.S								
	- Legal Provision								
	- Relation with D.P.								
	- Relation with D.P Original Plot, final Plot, Semi-final Plot								
IV	- Incremental Contribution (Betterment charge)								
1 4	- Rational for charging Incremental Contribution	7							
	- Function of Arbitrator								
	- Advance Possession								
	- Advance i ossession - Amenities, Partially beneficial								
	- Cost of Scheme								
	Acts and Rules								
	- Municipal Act - MR and TP Act 1966								
V									
	- LA Act. 1894, and LARA 2013								
	- SEZ - DCR								
	Special Townships								
	- Special Township Policy								
	- Land requirement, procedures for locational clearance, salient feature								
VI	- Responsibilities of developer	7							
	- Hill station Policy								
	- few case studies								
	Ten case stadies
